```
CC a soluble or membrane associated intracellular protein of interest (POI)
CC from a cell involving contacting a cell comprising a soluble or membrane
CC associated intracellular POI with a membrane extracting composition (I)
CC and causing the POI to be released from the cell in a soluble form. The
CC method is useful for releasing POI, such as an interleukin I receptor
CC antagonist (IL-1ra) which involves contacting a transformed cell
CC comprising IL-1ra with (I) and causing IL-1ra to be released from the
CC transformed cell, in a soluble form. The method is also useful for
CC screening mutated cells or transformed cells producing elevated levels of
CC intracellular POI. The method is used to release a POI for manufacturing
CC food products, such as beverages, preparation of detergents, and in
CC baking as a dough improving agent. The method obtains a fast, specific
CC and economically efficient extraction of a soluble or membrane associated
CC intracellular POI without the use of conventional cell disruption
CC techniques. The resulting cell extract contains less contaminating
CC intracellular POI can be recovered from a eukaryotic host organism such
CC as yeast, before glycosylation takes place. The method can be used to
CC meadium.
CC meadium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The native HOX gene was altered using site-clirected mutagenesis in order to match the codon usage to known codon preferences of biotechnologically relevant yeasts, such as Pichia sp., to facilitate high level production of HOX in these organisms. The invention involves a method for releasing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 16; Fig 6; 108pp; English

                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                   Query Match
                                                                                                                                                                                                                                                                                  The present invention relates to a new anti-fouling composition. The composition involves a surface coating material, a hexose oxidase enzyme obtained from a marine organism and a substrate for the enzyme. The anti-fouling composition is useful as a coating formulate for treating a surface, e.g. outdoor wood work, external surface of a central heating system, or a hull of a marine vessel. It is also useful as an anti-fouling agent for marine structures exposed to seawater flora and fauna.
                                                                                                                                                                                                                                                                                                                                                                                                                            New anti-fouling composition, useful as a coating for different surfaces, e.g. outdoor woodwork, external central heating system, or a hull of a marine vessel

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         B
AAW20076 shows the hexose oxidase (HO) enzyme of the marine algae species Chondrus crispus. HO is useful in the production of food products, e.g. dairy products, starch-containing food products (dough) and non-dairy beverages. HO and active peptide fragments have antimicrobial and antioxidant properties and act by removing all the oxygen in a food packaging. HO and peptides of HO can also be used in an animal feed, especially silage. Further uses are to reduce, or analyse, the sugar content in a food, in the production of cosmetics, tooth care products or a pharmaceutical product and in lactone production. HO can be recombinantly produced in industrially appropriate quantities, and at a quality and purity level which renders the polypeptide suitable for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hexose oxidase; Chondrus crispus; marine algae; recombinant; antimicrobial; antioxidant; food preparation; dairy product; starch; beverage; animal feed; silage; sugar reduction; cosmetics; dental; toothpaste; dough; lactone production.

The method is useful for producing hexose oxidase were to isolate the enzyme from a source that naturally produces the enzyme, using host organisms which produce a relatively low level of expression. Therefore, industrial produce a relatively low level of expression. Therefore, industrial produce in motored method which produces at least 250 mg enzyme per liter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acid fragment useful for producing large amounts of hexose oxidase comprises nucleotide sequence encoding hexose oxidase that modified by at least one codon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Stougaard

This is the amino acid sequence of the product of the spnJ gene. The CC protein is involved in spinosyn biosynthesis. The SpnJ gene is one of 23 CC genes and open reading frames contained in an 80kb DNA sequence CC ARZAISO1. Spinosyns are insecticidal microlides which are useful for the CC control of arachnids, nematodes and insects. Biosynthesis of spinosyns CC cours via stepwise condensation and modification of carboxylic acid CC precursors generating a linear polyketide which is modified further. The CC DNA sequence contains a central region of approximately 55kb which has CC homology to the DNA encoding the polyketide synthases (PKS) of known CC macrolide producers. The spinosyn PKS DNA region consists of 5 ORFs with CC stop codons at the end of acyl carrier protein (ACP) domains. Together the PKS polypeptides (AAY3929-Y39301), form a complex consisting of an CC initiator module, spnA, and several extender modules spnB-spnE. The CC products of the genes present in the region upstream of the PKS genes are spinosyn biosynthesis. There are also two CRFs ORFILS and ORFIL6 present immediately upstream of the PKS genes CC nownstream of the PKS region producing polypeptides AAY39316-Y39317, and two ORFS ORF1 and ORF2 present CC downstream of the PKS region producing polypeptides AAY39318-Y39319. It is suggested that SpnJ is involved in oxido reduction during spinosyn complex consistion of spinosyns, and consynthesis. The genes are useful to improve yields of spinosyns, and cfor creating new spinosyns e.g. by mutagenesis, or interruption of steps of spinosyn biosynthesis. The modified spinosyns may be a new insect control agent or serve as substrates for further chemical modification cuseful to isolate similar sequences from S. spinosa or other species by Chybrides and control spinosyns are also useful to isolate similar sequences from S. spinosa or other species by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Spinosyn biosynthetic enzyme; open reading frame; ORF; insecticidal microlides; arachnid; nematode; insect; polyketide; polyketide synthase PKS; extender module; initiator module; acyl transferase domain; AT; acyl carrier protein; ACP; beta-ketosynthase domain; KS; KR; dehydratase domain; DH; enoyl reductase domain; ER; beta-ketoreductase; insecticide; oxido-reduction.

```
This invention describes a novel method nucleic acid (I) and its encoded polypeptide (II) containing at least one region that encodes an enzymatic activity involved in biosynthesis of spinosyns. (I) are used (i) to identify, inactivate or modulate genes involved in the biosynthesis of (II); (ii) to generate a library of polyketide synthases; (iii) for adding forosamine or trimethylrhammose to a spinosyn or polyketide aglycone; and (iv) for recombinant production of the corresponding enzymes, which are used for production of (II), their precursors or derivatives, including production of transgenic plants that express or derivatives, including production of transgenic plants that express or derivatives for sequencing of the Saccharopolyspora spinosa genome. (II) are markers for sequencing of the Saccharopolyspora spinosa genome. (II) are macrolides with insecticidal, but not antibacterial, activity, and can also be used to raise specific antibodies, useful for identifying capression clones in a gene bank. Cells transformed with (I) may produce (II) at significantly increased levels or produce new derivatives of (II). This sequence represents an S. spinosa C-C cyclising enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    07-FEB-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 5; SEQ ID NO 346; 261pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         organisms -

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying plant target comprising aligning and c from plant with nucleic a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                           The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequence from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       07-FEB-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WO200210210-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying plant target comprising aligning and c from plant with nucleic a

The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

The THCA gene sequence can be used to produce an expression vector containing the gene. Cells can be transformed using the vector, so that they produce a protein with THCA synthase activity. THCA can be used for anaesthesia, pain-killing, intraocular pressure lowering and anti-inflammatory treatment.
                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                유 성
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      망
                                                                                     The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying plant target proteins for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-FEB-2002.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Arabidopsis thaliana.
